Education

Stony Brook University Bachelor of Science in Computer Science	Stony Brook, New York 2023
--	--------------------------------------

Technical Skills

Languages: JavaScript, TypeScript, Python, Java, C, C#, C++, SQL, Kotlin, HTML/CSS
Frameworks/Tools: React, Android Studio, Node.js, Godot, Unity, Git, .NET, MongoDB, Pandas, Figma, Linux
Concepts: REST APIs, OOP, Data Structures & Algorithms, Networking

Projects and Certifications (Further details can be found on my [portfolio](#))

Forage Software Engineering Job Simulations Certifications: JPMorgan Chase, Walmart, Wells Fargo, Commonwealth Bank, Quantum	2026
---	------

Google IT Support Professional Certificate Topics: Troubleshooting, System Administration, Cybersecurity, Operating Systems, Networking	2025
--	------

The Sting - 2D Action Roguelike, Independent Project (Unity) - Developed a Unity/C# roguelike inspired by Punch-Out!! during the Brainless Game Jam in collaboration with a multidisciplinary team. - Designed and implemented an event-driven combat system that queued player and enemy actions, enabling combo chains, attack timing, and interruptible animations. - Engineered reusable gameplay systems to simplify adding new attacks and enemy behaviors.	2026
---	------

Devil's Advocate - Narrative Visual Novel, Independent Project (Godot) - Developed with a five-person cross-functional team a visual novel for Ludum Dare 55, placing in the top 25. - Built a custom dialogue management system in Godot that supported scripted events, branching conversations, and character animations.	2024
--	------

Tileslate - Collaborative Map Editor, Capstone Project (MongoDB, Express, React, Node.js) - Developed a collaborative full-stack web application in a four-person team to create and share 2D game maps. - Engineered the back-end using Express and MongoDB, facilitating seamless API requests/responses for collaborative tileset and map creation. - Implemented a user authentication system that handled encrypting and storing user data and offering email password recovery via third-party email API. - Designed the React front end, focusing on usability and collaborative workflows.	2023
--	------

Computer Networking, College Project (Python, Wireshark) - Implemented HTTP and proxy servers in Python using socket programming. - Used Wireshark to analyze packet transmission, debug network behavior, and verify protocol implementations. - Applied concepts including TCP/IP, sockets, routing, and HTTP communication.	
---	--

Professional Experience

Varsity Tutors Computer Science Tutor	Remote 2025 – Present
Pear Deck Tutors Computer Science Tutor	Remote 2023 – 2025
- Taught Java and Python programming to hundreds of high school and college students through one-on-one virtual lessons. - Guided students through algorithms, data structures, object-oriented programming, and debugging, contributing to successful completion of advanced coursework and projects.
